

1.Password Complexity

These forces users to create strong passwords to ensure passwords aren't easy to guess.

Policy	Policy Setting
 Enforce password history	10 passwords remembered
 Maximum password age	60 days
 Minimum password age	1 days
 Minimum password length	10 characters
 Password must meet complexity requirements	Enabled
 Store passwords using reversible encryption	Disabled

2. Account Lockout After Failed Attempts

Locks account after 4 failed password tries for 1 minute to protect user accounts by preventing repeated unauthorized login attempts.

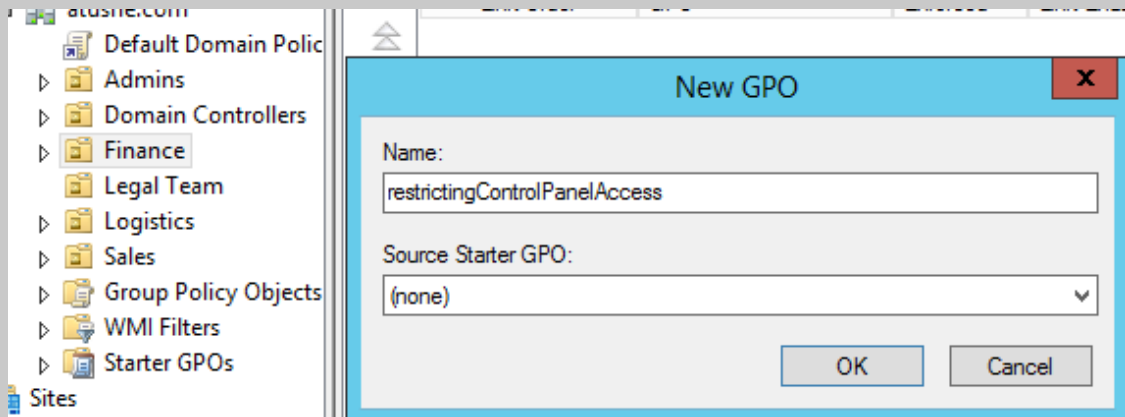

Policy	Policy Setting
 Account lockout threshold	4 invalid logon attempts
 Account lockout duration	15 minutes
 Reset account lockout counter after	15 minutes

3. Disable Control Panel

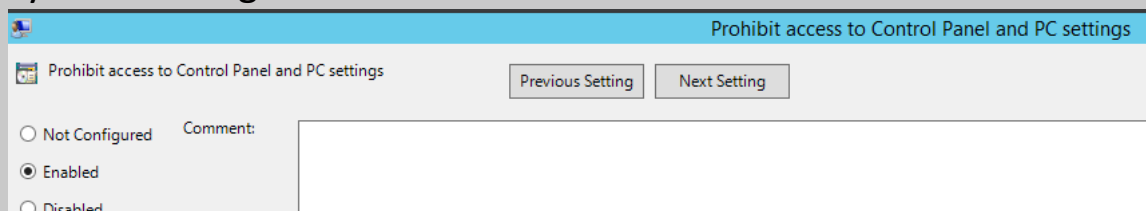

The Control Panel gives users access to system-level settings, like: Network settings, Security settings, Installed programs and Firewall settings.

Control Panel is restricted so that users should only use what they need (principle of least privilege), prevent unauthorized changes and stop users from weakening security by mistake.

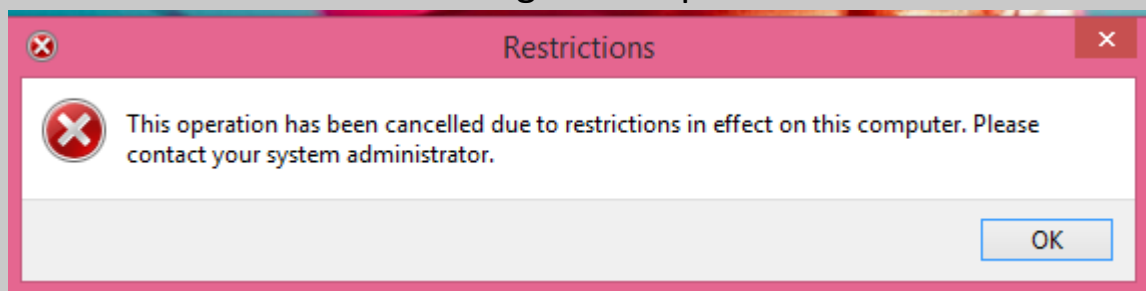

- i. Creating a GPO to ensure that the rule applies ONLY to the users inside the Finance OU .

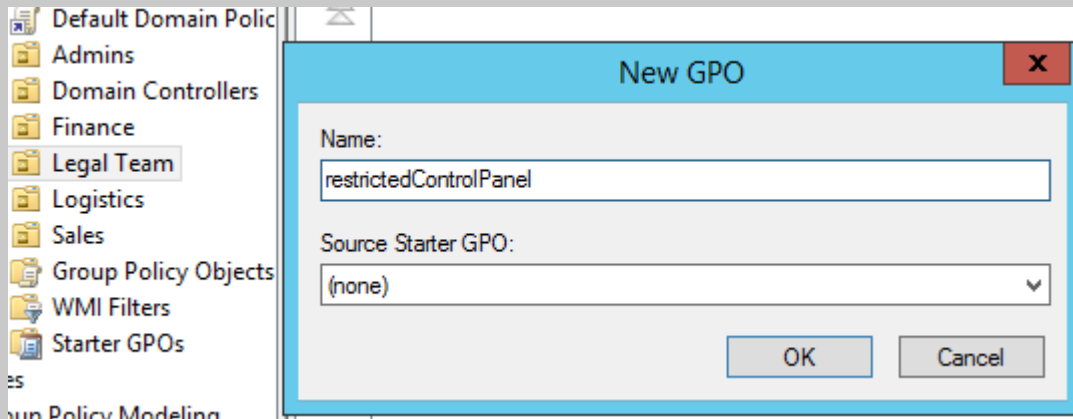

- ii. When **Prohibit access to Control Panel and PC settings** is enabled users cannot open Control Panel, Users cannot change system settings.

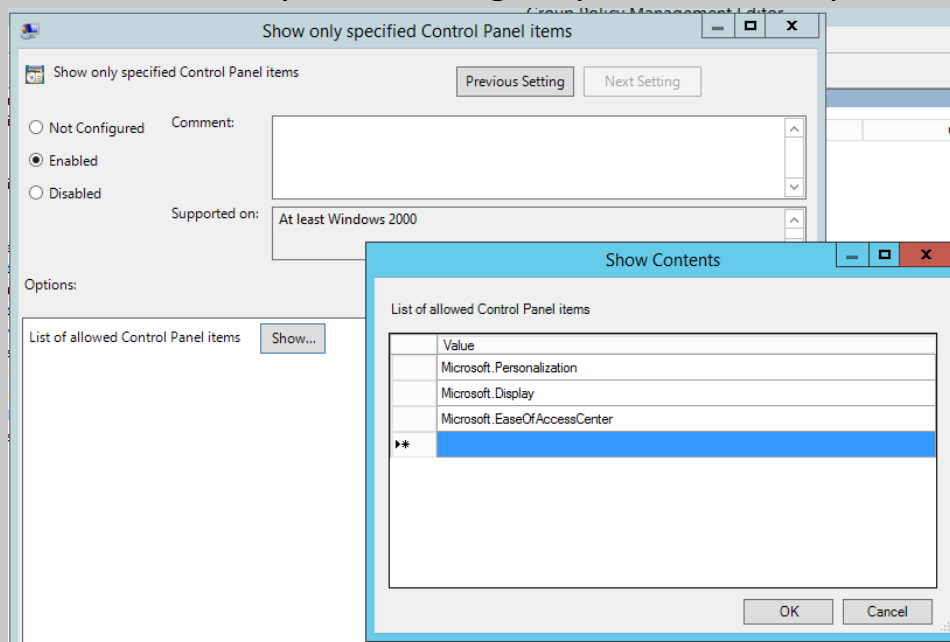

- iii. User is blocked from accessing control panel

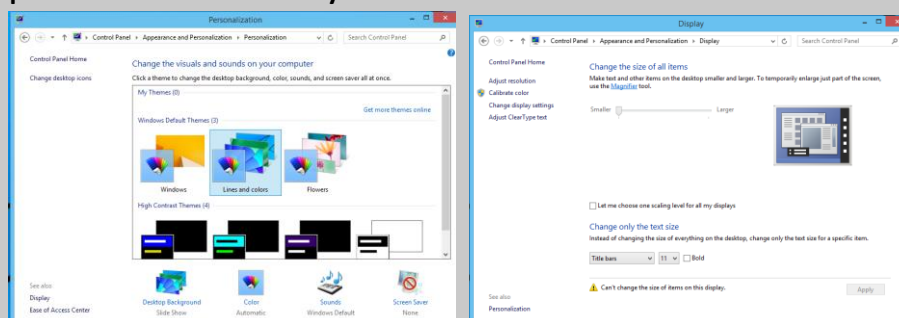

- a. Created a GPO inside the legal team OU .They are restricted, but not completely locked out of usability. They can access control panel to change personalization (wallpaper, fonts, and display settings).

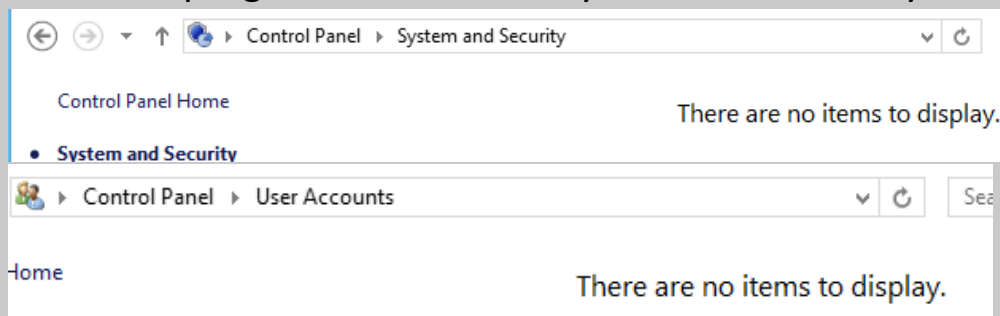

- b. Entered the canonical name for the settings in control panel thus successfully whitelisting only those three specific areas.

- c. User can change wallpaper, adjust fonts, display, and personalize their system.

But cannot access other parts of the control panel such as user accounts, programs installed or systems and security

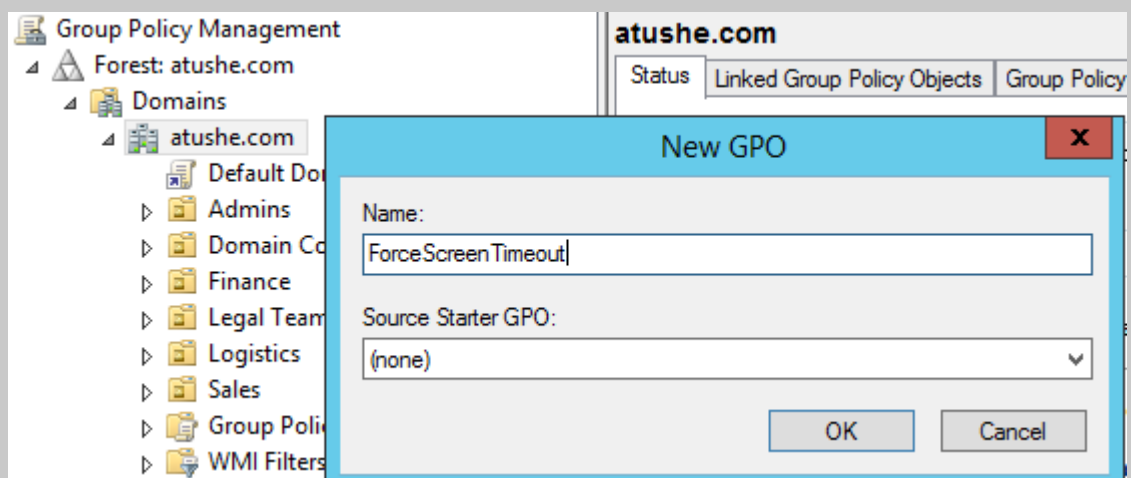

4. Enforcing Screen Timeout

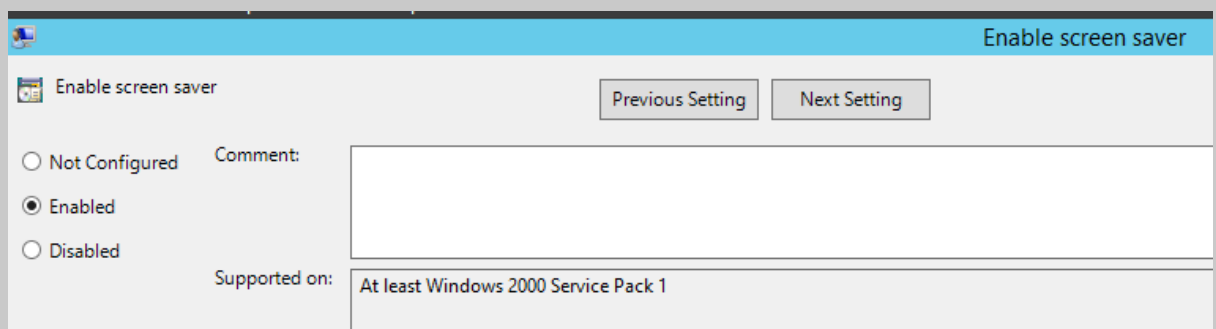

This setting automatically locks the computer after inactivity.

Enforcing it prevents unauthorized physical access and data exposure when user walks away.

- a. Applying rule at the domain level so it affects all users in all OUs.

- b. Screen saver is enabled

- c. Enabling screen timeout and setting it to 300 seconds (5 minutes). After five minutes of inactivity, the screen will lock.
